llama3.1-8b: N = 128,256 atoms in d = 4096

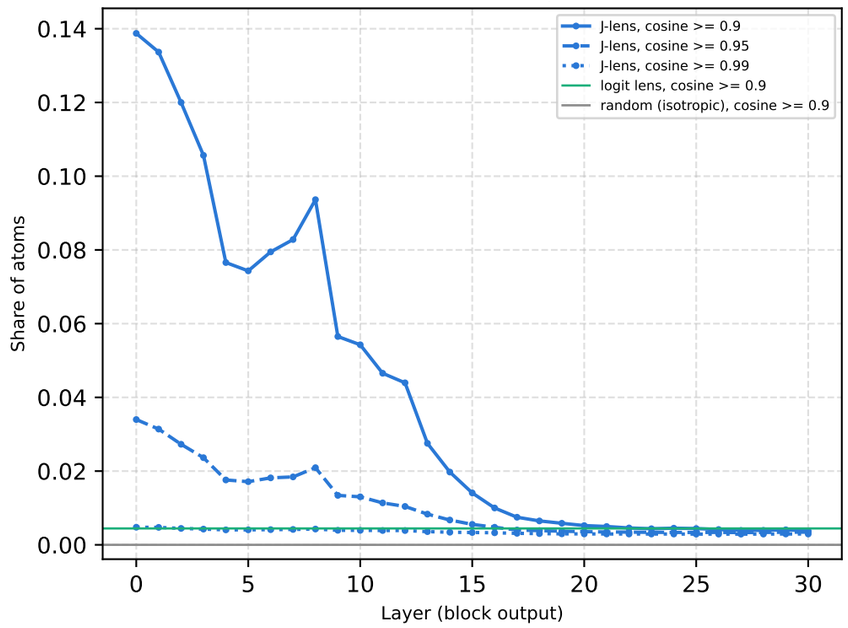

Nearest neighbour of each atom

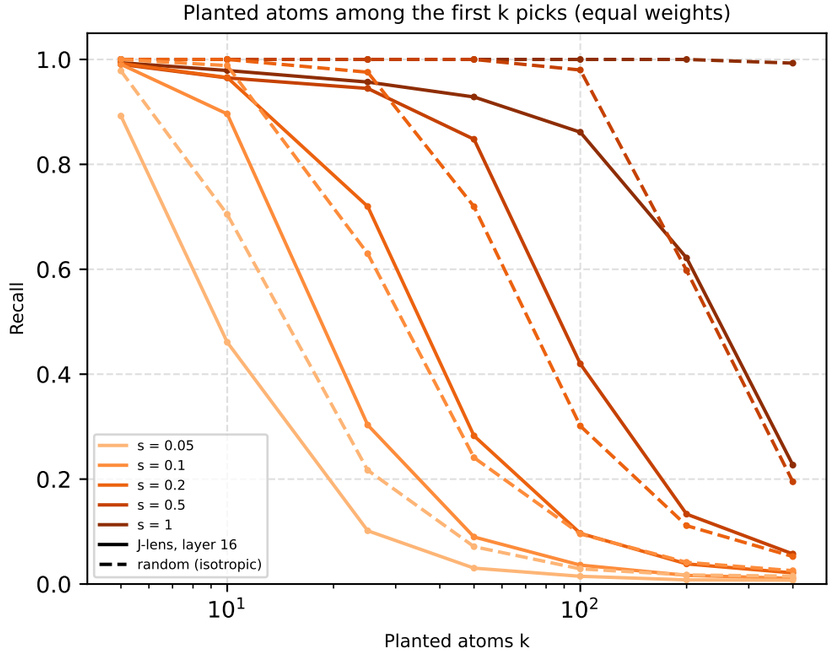

Spectrum of (d / N) $V^T V$ (mean 1)

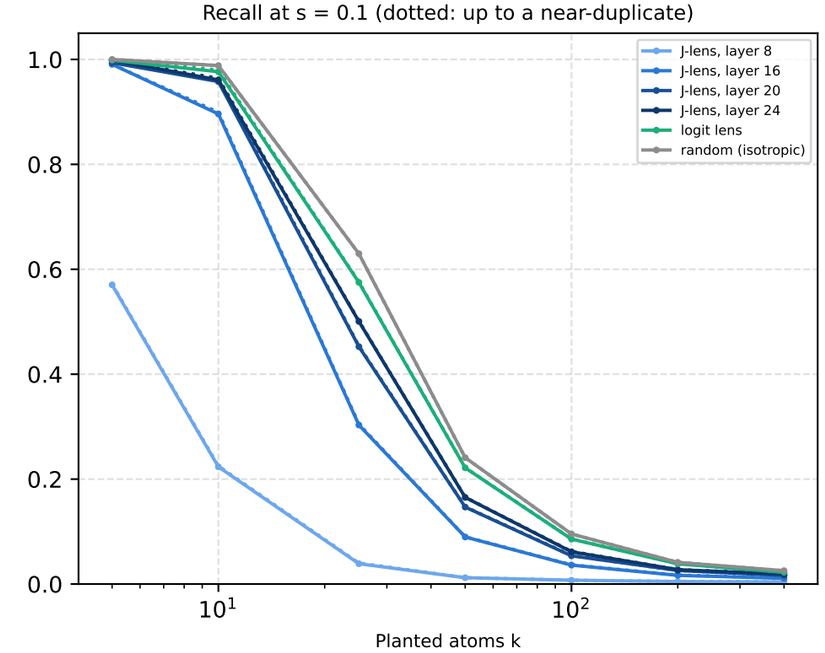

Atoms with a near-duplicate

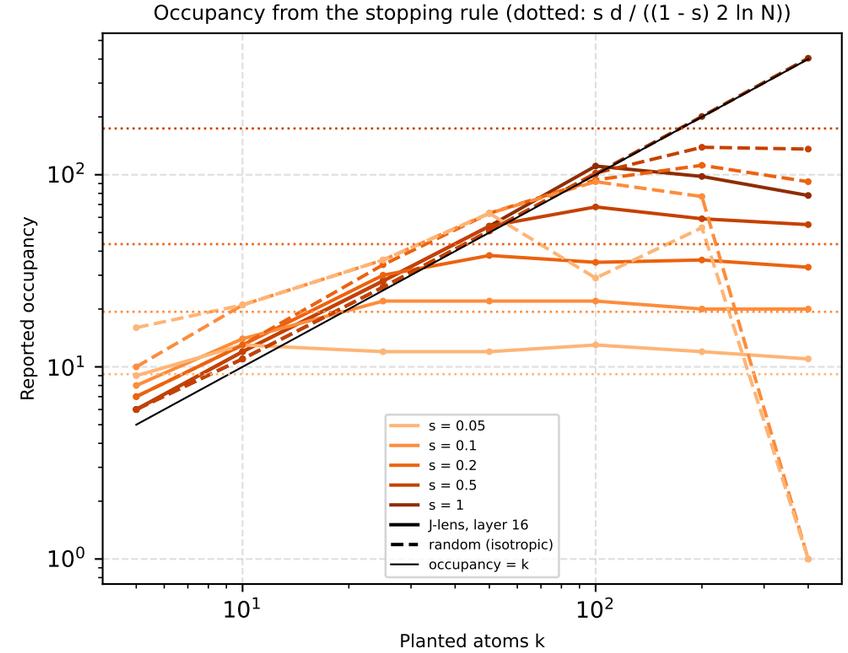

Planted atoms among the first k picks (equal weights)

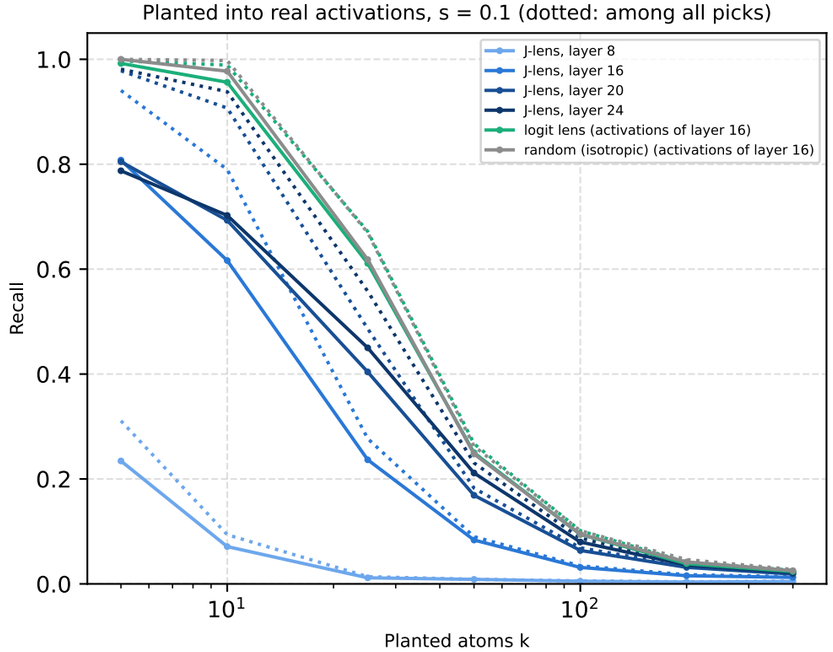

Recall at s = 0.1 (dotted: up to a near-duplicate)

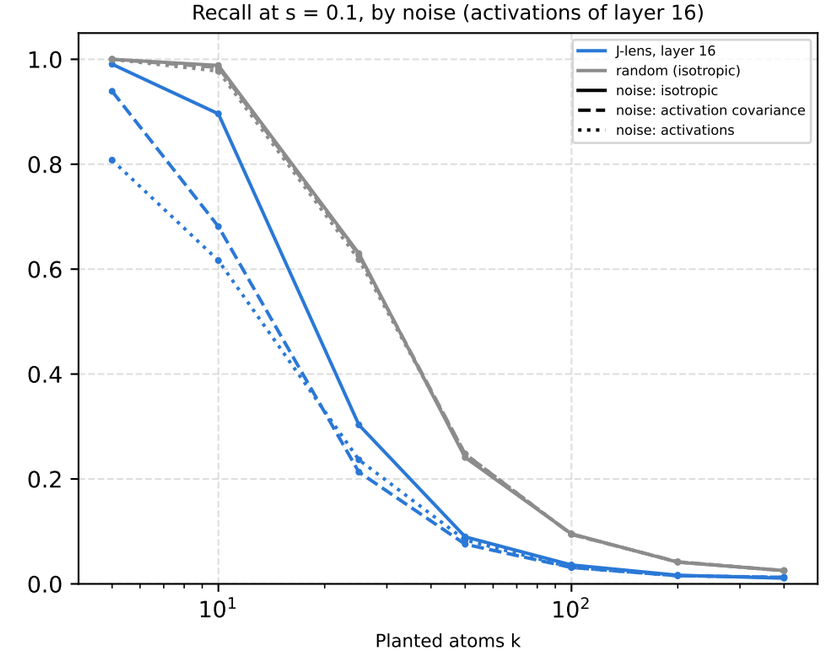

Occupancy from the stopping rule (dotted: s d / ((1 - s) 2 ln N))

Planted into real activations, s = 0.1 (dotted: among all picks)

Recall at s = 0.1, by noise (activations of layer 16)

Occupancy from the stopping rule, J-lens layer 16
